or treatment of malaria. This fact sheet provides information about its use for the prevention of malaria infection associated with travel.

Who can take chloroquine?

Chloroquine can be prescribed to adults and children of all ages. It can also be safely taken by pregnant women and nursing mothers.

Who should not take chloroquine?

People with psoriasis should not take chloroquine.

How should I take chloroquine?

Both adults and children should take one dose of chloroquine per week starting at least 1 week before traveling to the area where malaria transmission occurs. They should take one dose per week while there, and for 4 consecutive weeks after leaving.

has its risks: the drugs could be of poor quality, contaminated, or counterfeit and not protect you against malaria.

In what parts of the world can chloroquine be used for prevention of malaria in travelers?

There are only a few places left in the world where chloroquine is still effective including parts of Central America and the Caribbean.

CDC keeps track of all the places in the world where malaria transmission occurs and which malaria drugs that are recommended for use in each place. This information can be found using the malaria map on the CDC website: <http://www.cdc.gov/malaria/map/index.html>.
