Date: 06/26/23

PATIENT: KELLEY, JOYCE **DOB:** 08/18/1976 **Gender:** FEMALE **MRN:** 1250 **AGE:** 46 Years

VISIT TYPE: Office Visit Established

CHIEF COMPLAINT: Possible yeast infection.

HISTORY OF PRESENT ILLNESS: Mrs. Kelley is a 46 yo female here today for possible yeast infection. She typically gets them with some antibiotics and then at least once a summer. She swam in cold water last Wednesday and on Thursday she had vaginal discomfort, lower abdominal pain, urethral irritation, and vaginal discharge. All the symptoms she states are normal for her when she has a yeast infection. Her PCP sent in a prescription for diflucan as she has refills on file due to frequent yeast infections. She took one dose on Thursday. Felt better Friday, then worse again on Saturday. She comes in today requesting urinalysis to r/o UTI before she takes the second diflucan pill.

Of note, she only has a period every 3 months due to her birth control. She is scheduled to start tomorrow and reports always having blood in urine the day or to before her cycle starts and that her PCP typically repeats a UA after her cycle and the blood is cleared.

VITALS: BP: 138/82 **Pulse:** 89; **Temp:** 98.5; **Resp:** 16; **Ht:** 66 in.; **Wt:** 123.2 lbs.; **BMI:** 19.88; **Pulse Oximetry:** 100%; **FDLMP:** 03/27/23

ALLERGIES: No Known Drug Allergies

MEDICATIONS:

Apri 0.15 mg-0.03 mg tablet
Synthroid 75 mcg tablet (once daily in the AM)
