Pulmonology Consultation

THORNE, MATTHEW - 11129661

Chief Complaint

Referring physician: Lindsey Barton, CRNP

Reason for referral: dyspnea, wheezing

History of Present Illness

Mr. Thorne is 39-year-old old pleasant gentleman presented to Pulmonary Clinic for evaluation of shortness of breath.

He is nonsmoker. He denies for childhood history of asthma. He started noticing worsening shortness of breath around August 2022. he has on and off symptoms of coughing, wheezing and chest tightness. He had PFT in November 2022 which showed mild airflow obstruction with significant response to bronchodilators. He was started on montelukast 10 mg daily along with albuterol p.r.n.. He has noticed significant improvement since started on montelukast. He continues to use albuterol 30 minutes prior to exercise. He notices some improvement with albuterol.

He has started doing exercise regularly and trying to lose weight. This has been helping him also with his shortness of breath. He is complaining of transient episode of left-sided chest pain which is not aggravated by exertion or deep breathing or coughing. It is usually dull in nature and he can feel with touch. However, it is not aggravated by any movements. He is very functional and able to do regular exercise without chest pain or shortness of breath.

Review of Systems

Twelve system review of system was obtained and pertinent positive and negative as mentioned in HPI

Physical Exam**Vitals & Measurements**

HR: 85 (Peripheral) BP: 131/79 SpO2: 96%

HT: 72 in WT: 230 lb BMI: 31.19

Gen: alert, no acute distress

HEENT: Normal conjunctiva, oral mucosa moist

Neck: supple

Lungs: bilateral air entry present

Cardiovascular: normal rate

Abdomen: soft, non tender

CNS: patient is alert, awake, oriented. Able to follow simple commands

Extremities : no clubbing, cyanosis, edema

Assessment/Plan

1. Asthma

- he has on and off symptoms of airway disease since August of 2022.
- PFT November 2022 showed mild airflow obstruction with significant response to bronchodilators.
- He is responding to montelukast and SABA
- PFT 5/23/23 - no airflow obstruction, no restrictive physiology, normal gas transfer
- chest x-ray 05/23/2023 - no acute abnormality
- I briefly explained him pathophysiology and treatment option for asthma.
- I encouraged him to avoid allergens
- I recommended inhaled steroids and bronchodilators as first-line treatment rather than montelukast. I will start him on Breo 100/25 daily. I will continue montelukast 10 mg p.o. q.h.s. along with albuterol p.r.n..
- Patient repeatedly mention that he would like to avoid being on long-term medications. I explained risks and benefits of current treatment regimen for

Diagnostic Results

PFT done on 05/23/2023

Patient showed good effort. Flow volume
loop is of good quality.

1. No airflow obstruction
2. No restrictive physiology
3. Normal gas transfer

Chest x-ray PA lateral done on
05/23/2023

No acute abnormality

Pulmonology Consultation**THORNE, MATTHEW - 11129661**

asthma. Once his symptoms are stable, I will try to wean him as tolerated.

2. Chest pain

- His chest pain is atypical in nature.
- I doubt if it is pulmonary or cardiac in etiology.
- He is requesting cardiology consultation to rule out any abnormality. I will refer him to Dr. Sharma.

Thanks for allowing us to take care of this patient.
I will follow with him after 3-4 months.

cc: Lindsey Barton, CRNP
