CHIEF COMPLAINT: Varicella and Hep B injection

HISTORY OF PRESENT ILLNESS: Mr. Hunt is a 20 yo male. He is a student at Trenholm State. He was here to update his vaccinations. He has had Hep B series as a child but his Hep B titer was negative. He was also told his varicella antibody was negative as well. He was given both injections. He was given the varicella in the right arm and the Hep B booster in the left arm. PTA his Hand was broken out due to chemicals he uses at work. After injection he seemed fine, he then proceeded outside and mentioned that he was feeling flush and started experiencing chest tightness. Hives started to appear and also facial swelling and redness. He was having tingling in his lips but denied difficulty swallowing or breathing.

His mom was present. She reports he has a history of anaphylactic shock from advil in the past. Otherwise, no known allergies to anything else. He denied having an allergy to eggs. He reports he eats them all the time.
