Chief Complaint

New PT- SOB post Covid
 Covid vaccine x2
 PCP- Lidsey Barton
 PT# 706.585.0398

Assessment/Plan

1. Chronic cough

Patient has a postviral cough syndrome which is clearing. No directed therapy is needed.

2. Mild reactive airways disease

Patient had mild reactive airways disease secondary to viral bronchitis. I instructed her to continue with her bronchodilators for at least another 4 weeks. In that time she should be able to stop all inhalers. Will plan on seeing him back on an as-needed basis.

History of Present Illness

This patient is a 54-year-old female who comes in today for with the complaint of chronic cough and wheeze. The patient was in a good state of health until July 4th. She developed symptoms consistent with an acute respiratory infection. She had cough and congestion and chest tightness. She had 2 negative flu test and four negative test for COVID 19. She was initially treated with a Z-Pak and a Medrol Dosepak. Symptoms persisted. She then began taking Breztri and albuterol for rescue. She had a 2nd round of antibiotics and a steroid shot again with only minimal improvement. Over the last week and a half to 2 weeks the patient has improved significantly. The wheezing has cleared and she has no residual cough or sputum production. She has occasional chest tightness and feel mildly short of breath with activity. She has no fever chills or night sweats. She had a chest x-ray on 07/11/2022 which she was told was negative. She has no significant indigestion she has no sinus disease. She is a nonsmoker.

Physical Exam

Vitals & Measurements

T: 98.0 °F (Oral) HR: 72(Peripheral) RR: 18 BP: 132/70 SpO2: 98%

HT: 63 in WT: 86.5 kg BMI: 33.71

Well-developed alert overweight female in no distress
 Lung-good breath sounds bilaterally no rales rhonchi wheezes
 Heart-normal sinus rhythm no murmurs gallops or rubs
 Extremities-no clubbing cyanosis or edema
 Neuro-nonfocal
