Left index finger cleansed with alcohol prep. Using sterile technique, left index finger was numbed using digital block with 1% lidocaine without epi. A total of 2 ml used. Once block was achieved, area was recleansed with alcohol prep. The tip of 18 g needle was inserted into the abscess and moderate amount of green pustular drainage was expressed. Wound culture was obtained of the drainage. Partial wedge resection was completed of the medial aspect of the fingernail with removal of a hang nail at the nail bed. Wound cleansed and dressed with bandage. No complications and procedure tolerated well. Wound care instructions given.

ORDERS:

Incision and Drainage (1 unit(s)): Surgical Procedure
Culture, Wound (1 unit(s)): Quest Diagnostics

ASSESSMENT:

L03.012 - CELLULITIS OF LEFT FINGER (PRIMARY)

PLAN:

Continue keflex and mupirocin as directed. Follow up with wound culture results. Follow up in clinic if no improvement or worsening symptoms.
