Category: OXFORD MEMPHIS HL7

Test Name	Result	Flags	Reference Range
T-SPOT.TB	Negative		Normal Value: Negative

A negative test result does not exclude the possibility of exposure to or infection with *Mycobacterium tuberculosis* (*M. tuberculosis*). Patients with recent exposure to TB infected individuals exhibiting a negative T-SPOT.TB result should be considered for retesting within 6 weeks or if other relevant clinical symptoms indicate. Results from T-SPOT.TB testing must be used in conjunction with each individual's epidemiological history, current medical status, and results of other diagnostic evaluations.

The T-SPOT.TB test is qualitative and results are reported as positive, borderline or negative, given that the test controls perform as expected. In line with the Centers for Disease Control and Prevention's 2010 recommendation to report quantitative measurements alongside the qualitative result, the laboratory provides spot counts for informational purposes only. The T-SPOT.TB test should not be interpreted as a quantitative test.
