**STATUS:** FINAL

| <u>Test Name</u>                          | <u>Abnormal</u> | <u>Result Value</u> | <u>Unit of Measure</u> | <u>Ref Range</u> | <u>Status</u> | <u>Producer ID</u> |
|-------------------------------------------|-----------------|---------------------|------------------------|------------------|---------------|--------------------|
| CREATININE, RANDOM URINE                  |                 | 282                 | mg/dL                  | 20-320           | F             | AT                 |
| ALBUMIN, URINE                            |                 | 3.0                 | mg/dL                  |                  | F             | AT                 |
| Reference Range                           |                 |                     |                        |                  |               |                    |
| Not established                           |                 |                     |                        |                  |               |                    |
| ALBUMIN/CREATININE RATIO,<br>RANDOM URINE |                 | 11                  | mcg/mg creat           | <30              | F             | AT                 |

.  
The ADA defines abnormalities in albumin excretion as follows:

|                                 |                            |
|---------------------------------|----------------------------|
| .<br>Albuminuria Category       | Result (mcg/mg creatinine) |
| .<br>Normal to Mildly increased | <30                        |
| Moderately increased            | 30-299                     |
| Severely increased              | > OR = 300                 |

.  
The ADA recommends that at least two of three specimens collected within a 3-6 month period be abnormal before considering a patient to be within a diagnostic category.
