

How do people get infected with malaria?

People get malaria from the bite of a mosquito that is infected with the malaria parasite.

How can I prevent malaria?

1. Take an antimalarial drug.
2. Prevent mosquito bites.

Antimalarial drugs

How and where can I obtain antimalarial drugs?

Visit your health-care provider 4–6 weeks before travel for a prescription for an antimalarial drug based on your travel itinerary and medical history.

Antimalarial drugs are available in the United States by prescription only.

Some antimalarial drugs can be started the day before travel and so last-minute travelers can still benefit from a visit to their health-care provider before traveling.

Obtain your prescription **before** you travel rather than at your destination because buying medications abroad has its risks. They could be of poor quality, contaminated, or counterfeit and therefore not protect you from malaria.

All medicines may have some side effects. Minor side effects such as nausea, occasional vomiting, or diarrhea usually do not require stopping the antimalarial drug. If you have side effects that are too uncomfortable, see your health-care provider; other antimalarial drugs are available.

Name Robbyn Taylor Date 8/29/17
 Address _____
 Malarone 250/100mg
 Disp: 26
 Sig: Take one pill a day. Begin 2 days before departure, continue through stay and for 7 days after return.

Malaria transmission occurs in many tropical and subtropical countries (see map). CDC has a list of all the places in the world (http://www.cdc.gov/malaria/travelers/country_table/a.html) where malaria transmission occurs and the malaria drugs that are recommended for use in each place.

If you are traveling to parts of the world where malaria transmission occurs, you could be at risk for malaria.
