PATIENT: MEADOWS, LESLIE **DOB:** 02/18/1970 **Gender:** FEMALE **MRN:** 276 **AGE:** 54 Years

VISIT TYPE: Lab Only

CHIEF COMPLAINT: suture removal to right index finger

HISTORY OF PRESENT ILLNESS: 54 year old female presents to clinic today for suture removal to right index finger. At this time she does disclose that she only took 2 doses of the antibiotic prescribed due to adverse reactions of whole body cramping and flu like symptoms. Wound edges are well approximated, there is no pain, redness, drainage, or edema noted. Sutures are cleaned with wound cleanser and removed without difficulty. 2 sutures are removed completely and area is covered with a bandaid due to patient returning to work for the remainder of the day. NP is notified of the antibiotic reaction and the discontinuing of the medication. No new antibiotics prescribed at this time due to no signs/symptoms of infection.

ALLERGIES: Amoxicillin (substance); Macrobid; Sulfa (Sulfonamide Antibiotics)

MEDICATIONS:

Ortho Tri-Cyclen (28) 0.18 mg(7)/0.215 mg(7)/0.25 mg(7)-35 mcg tablet
