#00000MA20240002999 - MA MAMMO DIGITAL SCREEN BILAT

BILATERAL DIGITAL SCREENING MAMMOGRAM 3D/2D WITH CAD: 1/18/2024

TECHNIQUE: Two digital mammographic views with tomosynthesis of each breast were obtained, the study was also evaluated with a Computer Aided Detection (CAD) system.

COMPARISONS: Comparison is made to exam dated: 11/11/2021 Baptist Breast Health Center.

FINDINGS: The breasts are heterogeneously dense, which may obscure small masses.
No significant masses, calcifications, or other findings are seen in either breast.
There has been no significant interval change.

IMPRESSION: MAMMOGRAM NEGATIVE

There is no mammographic evidence of malignancy. A 1 year screening mammogram is recommended.

Lifetime risk of breast cancer - Tyrer-Cuzick model: 12.7%
Lifetime risk of breast cancer - Modified Gail model: 9.2%

For patients age 40 and older with an average risk of breast cancer (risk score less than 15%), annual screening mammography is recommended. Screening mammography with tomosynthesis has been shown to improve accuracy and reduce false-positive rates in women of all breast densities.

The patient has or will receive a written notification of results in lay terms.

According to AL Act 2013-284 SB22, the patient has been informed that she has dense breast tissue and might benefit from supplementary screening tests such as breast US or MRI. The patient may contact you if she has any questions or concerns.

A handwritten signature in black ink, appearing to read "J. Puryear".
