BERRY, TINA DOB: 10/20/1988 AGE: 28 Gender: F Fasting: U Phone: NG Patient ID: NG	Specimen: AL628587D Requisition: 6707505 Collected: 03/27/2017 / 01:15 CDT Received: 03/28/2017 / 00:08 CDT Reported: 03/28/2017 / 21:49 CDT	Client #: 49100638 QATL0000 FUENTES, MARYLUZ AUM NURSING CARE CENTER Attn: BIRMINGHAM SOLSTAS LAB 7461 EAST DRIVE #102 MONTGOMERY, AL 36117

Test Name	In Range	Out Of Range	Reference Range	Lab
MMR (IGG) PANEL (MEASLES, MUMPS, RUBELLA)				
MEASLES ANTIBODY (IGG)	3.52		index	AT

Index	Explanation of Test Results
< or = 0.90	Negative - No Rubeola (Measles) IgG Antibody detected
0.91 - 1.09	Equivocal
> or = 1.10	Positive - Rubeola (Measles) IgG Antibody detected

Positive results suggest recent or previous infection with Measles (Rubeola) virus and imply immunity. Patients exhibiting equivocal results should be retested in one month, if clinically indicated.

MUMPS VIRUS				AT
ANTIBODY (IGG)	1.65		index	

Index	Interpretation
< or = 0.90	Negative
0.91-1.09	Equivocal
> or = 1.10	Positive
A positive result indicates that the patient has antibody to mumps virus. It does not differentiate between an active or past infection. The clinical diagnosis must be interpreted in conjunction with the clinical signs and symptoms of the patient.	

RUBELLA IMMUNE STATUS				AT
RUBELLA ANTIBODY (IGG)	1.84		index	

Index	Interpretation
<0.90	Not consistent with Immunity
0.90-0.99	Equivocal
> or = 1.00	Consistent with Immunity

The presence of rubella IgG antibody suggests immunization or past or current infection with rubella virus.

VARICELLA ZOSTER VIRUS				AT
ANTIBODY (IGG)	1.94		index	

Index	Explanation of Results
< or = 0.90	Negative - No VZV IgG Antibody detected
0.91 - 1.09	Equivocal
> or = 1.10	Positive - VZV IgG Antibody detected

A positive result indicates that the patient has antibody to VZV but does not differentiate between infection (active or past) and vaccination. The clinical diagnosis must be interpreted in conjunction with the clinical signs and symptoms of the patient. This assay reliably measures immunity due to previous infection but may not always be

sensitive enough to detect antibodies induced by vaccination. Thus, a negative result in a vaccinated individual does not necessarily indicate susceptibility to VZV infection.
