Patient: WALDROFF, BARRETT W MRN: B001054975 FIN:
B2421000443
Age: 9 years Sex: Male DOB: 1/12/2015
Associated Diagnoses: None
Author: Lumpkin, Anitricia D, DO

Basic Information

Time seen: Date and time 7/28/2024 22:31:00.
History source: Patient, mother, father.
Arrival mode:
Automobile from Home or Work

Additional information: ED Chief Complaint
7/28/2024 22:44 CDT ED Chief Complaint Pt family states that the pt
has had a cough and wheezing since approx 1700 today. Was seen at Elmore Co,
given neb tx and steroids and D/C to home. Family states that the wheezing and
SOB has increased. Hx of asthma .

History of Present Illness

The patient presents with cough and pt presents from triage with a oxygen
saturation level of 88%. Per mother, 1 day history of cough, wheezing that
progressively became worse. Pt was seen at Elmore tonight, treated and
discharged. Per mother, on the way home, pt became worse so they came to baptist
south. On exam, pt has abdominal retractions and is requiring oxygen. . The
onset was just prior to arrival. The course/duration of symptoms is worsening.
Character dry. The degree at onset was 10 /10. The degree at present is
moderate. The exacerbating factor is none. There are relieving factors
including beta agonist and oxygen. Risk factors consist of none. Prior
episodes: none. Therapy today: beta-agonist (albuterol, steroids, oxygen).
Associated symptoms: shortness of breath, nasal congestion, denies sore throat
and denies rhinorrhea.

Health Status

Allergies:
NKA

Allergic Reactions (Selected)

NKA.

Medications:

PROCEDURE: UNITS: REF RANGE:
Influenza B PCR NEGATIVE - [NEGATIVE]
[i2]
SARS-CoV-2 PCR NEGATIVE - [NEGATIVE]
[i4]

Interpretive Data

i2: Influenza A PCR, Influenza B PCR, RSV PCR
Uses RT-PCR to detect viral RNA.
i3: STREP A PCR
Uses Real Time PCR to detect DNA.
i4: SARS-CoV-2 PCR
This assay is designed to detect the N2 and E genes of SARS-CoV-2 using nucleic acid amplification. A Not Detected result does not preclude the possibility of 2019-nCoV infection since the adequacy of sample collection and/or low viral burden may result in the presence of viral nucleic acids below the analytical sensitivity of this test method. Test results should be used along with other clinical and laboratory data in making the diagnosis.

This test has received FDA Emergency Use Authorization and has been verified by Baptist Medical Center South Laboratory. This test is only authorized for the duration of the declaration and the circumstances that exist to justify the authorization of the emergency use of in vitro diagnostic tests for the detection of SARS-CoV-2 virus and/or diagnosis of COVID-19 infection under section 564(b)(1) of the Act, 21 U.S.C. 360bbb-3(b)(1), unless the authorization is terminated or revoked sooner.

This testing was performed in the Baptist Health laboratories, Montgomery, AL.

Microbiology

Interpretive Data

i5: Blood Culture

Applicable to Positive Blood Cultures only

Positive Blood culture bottles are evaluated by Gram Stain and the Roche eFlex rapid BCID molecular identification system. Molecular detection of the following bacteria and antimicrobial resistance genes will be reported in the medical record within 6 hours of bottle positivity.

Gram Negative Targets: *Acinetobacter baumannii*, *Bacteroides fragilis*, *Citrobacter* species, *Cronobacter sakazakii*, *Enterobacter cloacae* complex, *Enterobacter* species (non-cloacae), *Escherichia coli*, *Fusobacterium necrophorum*, *Fusobacterium nucleatum*, *Haemophilus influenza*, *Klebsiella oxytoca*, *Klebsiella pneumoniae* group, *Morganella morganii*, *Neisseria meningitidis*, *Proteus* species, *Proteus mirabilis*, *Pseudomonas aeruginosa*, *Salmonella* species, *Serratia* species, *Serratia marcescens*, and *Stenotrophomonas maltophilia*.

Resistance Genes: CTX-M, NDM, OXA, KPC and VIM. Gram -negative organisms that are negative for these resistance genes can still demonstrate phenotypic susceptibilities patterns consistent with ESBL production or carbapenem resistance. The current institutional antibiogram can assist with empiric antibiotic therapy selection when these resistance genes are not detected.

Gram Positive Targets: *Bacillus cereus* group, *Bacillus subtilis* group, *Corynebacterium* species, *Cutibacterium acnes* (*Propionibacterium acnes*), *Enterococcus* species, *Enterococcus faecalis*, *Enterococcus faecium*, *Lactobacillus* species, *Listeria* species, *Listeria monocytogenes*, *Micrococcus* species, *Staphylococcus* species, *Staphylococcus aureus*, *Staphylococcus epidermidis*, *Staphylococcus lugdunensis*, *Streptococcus* species, *Streptococcus agalactiae*, *Streptococcus anginosus* group, *Streptococcus pneumoniae*, and *Streptococcus pyogenes*.

Resistance Genes: *vanA*, *vanB*, *mecA* and *mecC*.

Name: WALDROFF, BARRETT W DOB: 01/12/2015

MR: B1054975 Acct: B2421000443

Admitting Physician: PCF, NOT BUILT

Admit Date: 07/28/2024 Discharge Date:

RADIOLOGY

Procedure Name: CT Chest w/o contrast

Accession Number: CT240077944

Procedure Date/Time: 07/29/2024 03:54

Ordering Physician: Lumpkin, Anitricia D

FINDINGS

WALDROFF, BARRETT W

EXAM:

CT CHEST W/O CONTRAST

HISTORY:

wheezing/hypoxia.

COMPARISON:

No comparisons

TECHNIQUE:

Noncontrast CT images of the chest were obtained utilizing

contiguous 1.25 mm

axial collimation with reformatted sagittal and coronal images.

All CT scans

performed at this location utilize dose optimization techniques,

including

automated exposure control with adjustment of mA and/or kV

according to patient

size and use of iterative reconstruction technique.

FINDINGS:

LUNG FIELDS: Subtle ground-glass infiltrates are seen within the

right lower

lobe and lingula. There is no pleural effusion or pneumothorax.

MEDIASTINUM: No masses or fluid collections identified.

THORACIC AORTA: No aneurysm identified.

HEART: Normal in size.

OSSEOUS STRUCTURES: No gross abnormalities identified.

UPPER ABDOMEN: No gross abnormalities identified.

LYMPH NODES: No enlarged lymph nodes identified.

No significant coronary artery calcification.

IMPRESSION:

Subtle ground-glass infiltrates within the right lower lobe and
