OPERATIVE REPORT

DATE OF PROCEDURE: 10/25/2021

PREOPERATIVE DIAGNOSIS: Pilonidal abscess.

POSTOPERATIVE DIAGNOSIS: Pilonidal abscess.

PROCEDURE PERFORMED: Incision and drainage of pilonidal abscess.

SURGEON: Reza D Seirafi, MD

FIRST ASSISTANT: Veronica Davidson, MS3.

DESCRIPTION OF PROCEDURE: The patient was taken to the operating room, placed under general anesthesia. He was placed in a prone position, sterilely prepped and draped. He had been given preoperative antibiotics and DVT prophylaxis. The area in question was on the left pilonidal region and was approximately 2.2 to 2.5 cm deep. This had a pinpoint opening and was opened to approximately 8 mm in size, not to adequately clean out the area as well as packed the area with a lightly stained Betadine gauze. Pressure dressing was then applied. The patient was stable throughout the case and brought to the recovery room in good condition.

DISPOSITION: The patient will be discharged home and was given wound care instructions including to start packing the wound on a daily basis starting 2 days from now.
