

ISLAMABAD DIAGNOSTIC CENTRE (PVT) LTD.

IMAGING & LAB SERVICES

13-A, Kohistan Road, F-8 Markaz, Islamabad, Tel: +92 51 225 12 12, UAN: 92 51 111 000 432

E-mail: info@idc.net.pk, www.idc.net.pk

Name: Mr. Talha Babar

Age/Gender: 19 yr(s) / M

Ref. By: Dr. Sharyar Malik

Visit Date: 17-Dec-2017 1:44 pm

Final Report

Report Date: 18-Dec-2017 5:58 pm

Test Name	Results	*Last Available Results	Unit	Reference Ranges
-----------	---------	-------------------------	------	------------------

Special Pathology

Measles, Mumps, Rubella (MMR)
IgG

17-Dec-2017

Measles-IgG-ab

381.4

mIU/mL

Negative: <200
Borderline: 200-250
Positive: >250

Mumps Antibodies (IgG)

15.9

U/mL

Negative: <20
Borderline: 20 - 25
Positive: >25

Rubella IgG

13.3

IU/mL

Negative: < 5
Borderline: 5 - 10
Positive: > 10

Final Report

Report Date: 19-Dec-2017 4:22 pm

Test Name	Results	*Last Available Results	Unit	Reference Ranges
-----------	---------	-------------------------	------	------------------

IMMUNOLOGY

17-Dec-2017

Mantoux Test	Negative < 1		mm	Negative: 1 - 4 Borderline: 5 - 9 Positive: $\geq$ 10
--------------	-----------------	--	----	---

Interpretation

Area of induration (in mm):

1. 1 - 4 : Negative
2. 5 - 9 :
 - Healthy individuals : Borderline
 - Close contacts of active TB cases : Positive
 - HIV positive or injecting drug users : Positive
3. $\geq$ 10 All individuals : Positive

COMMENTS:

- Positive Mantoux skin test establishes exposure to TB in individuals who have been infected at some time with M. tuberculosis.
- Does not distinguish between current disease and past infection.
- False positive reaction occurs in:
 - Infection with non-tuberculous mycobacteria
 - BCG vaccination. BCG effect may last for one to several years.

Boosted Tuberculin Reaction

Boosted tuberculin reaction occurs when the initial test is negative and PPD injection is repeated after a week or so. This effect may also persist for at least 1 year.
