Lactoferrin Stool, Quantitative, should be interpreted in the context of clinical presentation. Normal individuals may have low positive values due to prior infection or environmental or travel exposures. The following patient samples should be excluded from use in the test: patients with a history of HIV and/or have hepatitis B or C, patients with a history of infectious diarrhea (within 6 months), and patients having had a colostomy and or ileostomy within 1 month. Patients with active Crohn's disease tend to have lactoferrin stool levels over 300 ug/mL. Those with active ulcerative colitis tend to have values over 1000 ug/mL.

Values are from the package insert.
