HSV 1/2 IGG, TYPE SPECIFIC

AT

AB				
HSV 1 IGG, TYPE SPECIFIC				
AB		34.80 H	index	
HSV 2 IGG, TYPE SPECIFIC				
AB		>23.00 H	index	
	Index	Interpretation		
	-----	-----		
	<0.90	Negative		
	0.90-1.09	Equivocal		
	>1.09	Positive		

This assay utilizes recombinant type-specific antigens to differentiate HSV-1 from HSV-2 infections. A positive result cannot distinguish between recent and past infection. If recent HSV infection is suspected but the results are negative or equivocal, the assay should be repeated in 4-6 weeks. The performance characteristics of the assay have not been established for pediatric populations, immunocompromised patients, or neonatal screening.
