Facility: Baptist East

Patient Name: DENT, PAMELA J PATTERSON

MRN: E000235247

FIN: E2020901167

Patient Type: Outpatient

Accession No: CT-20-0051694

Exam Date/Time: 07/30/2020 14:01

Ordering Physician: Tuck, Pamela P, MD

Resident: Contributor\_system, MODAL\_SYS

Interpreting Physician: Ng, Roland, MD

Reason for Exam: Solitary pulmonary nodule

DOB/Age/Sex: 8/11/1960 59 Years Female

Location: E-CT//

Exam: CT Angio Chest w or w/o + w contrast

Exam Status: Completed

Transcriptionist:

Report Status: Final

Transcribed Date/Time:

**Report**

DENT, PAMELA J

**EXAM:**

CT ANGIO CHEST W OR W/O + W CONTRAST

**HISTORY:**

Solitary pulmonary nodule. Presented with possible coronavirus pneumonia and AP portable chest June 26 demonstrated a 15 mm left perihilar nodule. Coronavirus positive.

**COMPARISON:**

CT Chest w/ contrast dated 3/27/2015; DX Chest 1 View dated 6/26/2020

**TECHNIQUE:**

All CT scans performed at this location utilize dose optimization techniques as appropriate to the performed exam. . 3D images of the pulmonary arteries were generated.

**FINDINGS:**

There is no central or peripheral pulmonary embolus. The pulmonary trunk is not enlarged. The aorta is normal. There are very minimal ground-glass opacities bilaterally consistent with coronavirus pneumonitis. There is 12 mm lucent nodular opacity lateral to the left hilum corresponding to the AP portable chest finding which may represent a more well-defined focus of consolidation rather than representing a true neoplasm. There is mild left hilar and mediastinal lymphadenopathy. This finding needs to follow-up with a CT chest in 3 months time. There is no pleural or pericardial effusion.

**IMPRESSION:**

No pulmonary embolus.
