STATUS: FINAL

<u>Test Name</u>	<u>Abnormal</u>	<u>Result Value</u>	<u>Unit of Measure</u>	<u>Ref Range</u>	<u>Status</u>	<u>Producer ID</u>
D-DIMER, QUANTITATIVE	H	3.63	mcg/mL FEU	<0.50	F	LL3

The D-Dimer test is used frequently to exclude an acute PE or DVT. In patients with a low to moderate clinical risk assessment and a D-Dimer result <0.50 mcg/mL FEU, the likelihood of a PE or DVT is very low. However, a thromboembolic event should not be excluded solely on the basis of the D-Dimer level. Increased levels of D-Dimer are associated with a PE, DVT, DIC, malignancies, inflammation, sepsis, surgery, trauma, pregnancy, and advancing patient age.
