PAST MEDICAL HISTORY: T2DM, asthma, chronic low back pain, varicose veins left leg.

PAST SURGICAL HISTORY:

SOCIAL HISTORY: + smokes cigarettes for past 4 years. Drinks alcohol socially. Denies illicit drug use.

FAMILY HISTORY:

REVIEW OF SYSTEMS:

CONSTITUTIONALS: All 14 point review of systems negative except those listed in HPI.

PHYSICAL EXAMINATION:

Male Exam- Right testicle remains swollen with cutaneous abscess to right groin. Small opening where incision was made is still present. Minimal amount of drainage able to be expressed. Fluctuance still present surrounding the wound. Tenderness to palpation improved. See wound care note under planning.

ASSESSMENT:

Z51.89 - Encounter for other specified aftercare (PRIMARY)

PLAN:

At this time the 1/4in iodoform packing is still intact and covered with dry 4x4 gauze. The 4x4 gauze has a small amount of serosang. drainage noted. The packing is removed gently, and is noted to be saturated with sanguineous drainage. There is no active drainage coming from wound once all dressing materials are removed. Area is tender to touch, induration still noted. No pus present at this time, no odor, no crepitus, and no erythema. Wound is cleaned with wound cleanser, surrounding skin is patted dry, then wound is packed with 1/4in iodoform gauze per order. Once packed, it is covered with dry 4x4 and secured with underwear. Patient is to return tomorrow for a dressing change. -
