Referring Physician

Referring Physician: BARTON, LINDSEY T, NP

Chief Complaint

Consult for scrotal abscess.

History of Present Illness

The patient is being referred to us for evaluation of an abscess. The patient states they have had a painful lump in their right upper scrotum region area for several days. The lump is increasing in size. They deny history of trauma to the area. We do not have any imaging of the area. They are s/p I&D and were started on oral abx and since have been much improved. They are a diabetic with what sounds like poorly controlled glucose. They deny fever.

Review of Systems

Gen: The patient denies fever, no night sweats, chills, loss of appetite, or weight loss or gain.

Skin: Per HPI

HEENT: Denies any decrease in vision or hearing, epistaxis, or dysphasia.

Cardiovascular: Denies any chest discomfort, syncope, orthopnea, PND, murmur or palpitations.

Respiratory: Denies cough, wheezing, pleurisy, hemoptysis, or shortness of breath.

GI: Denies abdominal pain, hematemesis, melena, constipation, diarrhea, nausea, or vomiting.

GU: Denies any hematuria, nocturia, lesions or discharge

Musculoskeletal: Denies any pain, swelling, stiffness in any joints.

Endocrine: Denies any polyuria, polydipsia, heat or cold intolerance.

Hematologic: Denies anything suggestive of prolonged bleeding or easy bruising.

Neurology: Denies any history of CVA, mental status changes or visual changes. Denies any seizures or paresthesias. Denies neurologic changes.

Physical ExamVitals and Measurements

T(Tympantic): 97.0 DegF(01/25/23 14:48:00)

HR(Monitored): 84 bpm(01/25/23 14:48:00)

RR: 16 br/min(01/25/23 14:48:00)

BP: 195/90 mmHg(01/25/23 14:48:00)

SPO2: 96 %(01/25/23 14:48:00)

Height: 71 in(01/25/23 14:48:00)

Weight: 114 kg(01/25/23 14:48:00)

BMI: 35 (01/25/23 14:48:00)

GENERAL APPEARANCE: Well developed, well nourished, in no acute distress.

SKIN: 3x3cm hard area in right upper scrotum, central opening draining,

HEENT: The sclerae were anicteric and conjunctivae were pink and moist.

NECK: Supple and symmetric. Normal cephalic.

CHEST: Normal AP diameter and normal contour without any kyphoscoliosis.

LUNGS: Clear to auscultation bilaterally
