CDM code
41430310**CDM description**
MR Lumbar spine MRI w/o contrast**Reason For Exam**
(MR Lumbar spine MRI w/o contrast) LBP**FINDINGS**
BRONSON, DARRYL**EXAM:**
MR LUMBAR SPINE MRI W/O CONTRAST**HISTORY:**
LBP lumbar back pain bilateral leg pain with numbness and tingling**COMPARISON:**
No comparisons**FINDINGS:**
Lumbar vertebral body height and alignment is unremarkable. Significant discogenic changes at L4-L5 and to a lesser extent L5-S1. Marrow signal is appropriate. The conus medullaris and cauda equina are unremarkable. Note is made of congenitally foreshortened pedicles. The paraspinal soft tissues do not demonstrate any abnormalities.

L4-L5: Moderately sized left lateralizing broad-based disc bulge. No facet arthropathy. Moderate central canal stenosis. There is moderate right-sided, and mild left-sided neural foraminal narrowing.

L5-S1: Small centralized disc protrusion. Minimal facet arthropathy. Mild central canal stenosis. There is moderate bilateral neural foraminal narrowing, greater on the right.

Remaining lumbar levels are normal.

Magnetic Resonance Imaging

FINDINGS

IMPRESSION:

Degenerative changes of the lower lumbar spine as detailed above.
Unfortunately this is exacerbated due to the patient's congenitally
foreshortened pedicles.
