STATUS: FINAL

| <u>Test Name</u>                          | <u>Abnormal</u> | <u>Result Value</u> | <u>Unit of Measure</u> | <u>Ref Range</u> | <u>Status</u> | <u>Producer ID</u> |
|-------------------------------------------|-----------------|---------------------|------------------------|------------------|---------------|--------------------|
| CREATININE, RANDOM URINE                  |                 | 82                  | mg/dL                  | 20-275           | F             | AT                 |
| ALBUMIN, URINE                            |                 | 0.3                 | mg/dL                  |                  | F             | AT                 |
| Reference Range                           |                 |                     |                        |                  |               |                    |
| Not established                           |                 |                     |                        |                  |               |                    |
| ALBUMIN/CREATININE RATIO,<br>RANDOM URINE |                 | 4                   | mg/g creat             | <30              | F             | AT                 |

.  
The ADA defines abnormalities in albumin  
excretion as follows:

|                                 |                          |
|---------------------------------|--------------------------|
| .<br>Albuminuria Category       | Result (mg/g creatinine) |
| .<br>Normal to Mildly increased | <30                      |
| Moderately increased            | 30-299                   |
| Severely increased              | > OR = 300               |

.  
The ADA recommends that at least two of three  
specimens collected within a 3-6 month period be  
abnormal before considering a patient to be  
within a diagnostic category.
