#00000MA20240003516 - MA MAMMO DIGITAL DIAG RIGHT

#00000MA20240003538 - MA US Breast Limited Right

**UNILATERAL RIGHT DIGITAL DIAGNOSTIC MAMMOGRAM 3D/2D WITH CAD AND RIGHT ULTRA SOUND:**  
**1/22/2024**

**TECHNIQUE:** Two digital mammographic views with tomosynthesis of the breast were obtained, the study was also evaluated with a Computer Aided Detection (CAD) system. Ultrasound of the right breast was performed.

**CLINICAL:** 6-month follow-up of probably benign right breast mass.

**COMPARISONS:** Comparison is made to exams dated: 7/21/2023 and 6/29/2023 Baptist Breast Health Center.

**FINDINGS:** There are scattered areas of fibroglandular density in the right breast.

There is a stable 1.6 cm circumscribed mass in the upper outer quadrant middle one third right breast. No new or suspicious findings seen mammographically.

Ultrasound at the 10 o'clock position right breast 9 cm from the nipple demonstrates a stable oval, circumscribed hypoechoic mass measuring 1.8 x 1.3 x 0.5 cm.

**IMPRESSION: MAMMOGRAM PROBABLY BENIGN, ULTRASOUND PROBABLY BENIGN**

Stable, probably benign right breast mass, likely a fibroadenoma. Recommend continued follow-up. Bilateral diagnostic mammogram recommended in 6 months.

A follow-up mammogram in 6 months is recommended.

The patient has or will receive a written notification of results in lay terms.
