MR Lumbar spine MRI w/o contrast**Reason For Exam**

(MR Lumbar spine MRI w/o contrast) Strain of unspecified muscles, fascia and tendons at thigh level, right thigh, initial encounter

FINDINGS

JAMES, VIVIAN D

EXAM:

MR LUMBAR SPINE MRI W/O CONTRAST

HISTORY:

Strain of unspecified muscles, fascia and tendons at thigh level, right thigh, initial encounter

COMPARISON:

No comparisons

TECHNIQUE:

MRI of the lumbar spine without contrast is obtained.

FINDINGS:

The visualized portions of the spinal cord are unremarkable.

The vertebral body heights are well maintained.

There is no evidence of spondylolisthesis.

Intervertebral disc spaces are narrowed. This is worst at L5-S1.

Bone marrow signal is unremarkable.

At L1-L2 level: There is a small disc bulge with minimal neural foraminal narrowing bilaterally.

At L2-L3 level: There is a small disc bulge with minimal bilateral neural foraminal narrowing.

At L3-L4 level: There is a small disc bulge with mild facet arthrosis causing mild bilateral neural foraminal narrowing.

Name: JAMES, VIVIAN D

Magnetic Resonance Imaging

FINDINGS

At L4-L5 level: There is a small disc bulge with facet arthrosis which causes mild bilateral neural foraminal narrowing.

At L5-S1 level: There is a small disc bulge with facet arthrosis which causes moderate bilateral neural foraminal narrowing.

There is mild edema in the posterior soft tissues.

IMPRESSION:

Degenerative changes as above. The worst level is L5-S1 are disc bulge and facet arthrosis causes moderate bilateral neural foraminal
