CDM description

CT Abd/Pelvis without Contrast

Reason For Exam

(CT Abd/Pelvis without contrast) stone search

FINDINGS

ASHMORE, WILLIAM

EXAM:

CT ABD/PELVIS WITHOUT CONTRAST

HISTORY:

stone search.

COMPARISON:

CT Abd/Pelvis with contrast dated 5/2/2019

TECHNIQUE:

All CT scans performed at this location utilize dose optimization techniques as appropriate to the performed exam.

FINDINGS:

Images through the lung bases demonstrate no acute findings. The liver and spleen appear homogeneous without contrast utilization. There are no calcified gallstones. Images through the pancreas and its bed appear appropriate. Adrenals appear appropriate. Kidneys demonstrate no stone disease. There are some mild to moderate obstructive changes on the left. The bowel and mesentery demonstrate no acute findings.

In the pelvis there is a stone in the urinary bladder axial image 181. Estimated size is 4 mm. It has likely just recently passed from the left ureter. Remaining calcifications in the pelvis are felt to rest outside the collecting system. Bowel and mesentery appear appropriate. There is no free air free fluid. Fat planes about the bladder base and rectum are well
