#00000MA20210053580 - MA MAMMO DIGITAL DIAG BILAT
#00000MA20210053603 - MA US Breast Limited Right

**BILATERAL DIGITAL DIAGNOSTIC MAMMOGRAM 3D/2D WITH CAD AND TARGETED RIGHT ULTRASOUND:
12/14/2021**

TECHNIQUE: Two digital mammographic views with tomosynthesis of each breast were obtained, the study was also evaluated with a Computer Aided Detection (CAD) system. Ultrasound of the right breast was performed.

CLINICAL: Bilateral breast pain. Palpable abnormality right breast for 1 week. Possible nipple retraction. Baseline mammogram.

COMPARISONS: No prior exams were available for comparison.

FINDINGS: There are scattered areas of fibroglandular density in the breasts.

A BB marks the area of palpable concern on the right breast. 2-D views of both breasts obtained as well as spot compression CC and MLO views of the palpable abnormality. No focal abnormality underlying the palpable marker. Targeted ultrasound of the right breast was performed with attention to the area of palpable concern and the right axilla. No solid or cystic lesion. Morphologically benign right axillary lymph nodes. On physical exam, there is no evidence of nipple retraction.

No significant masses or calcifications are seen in either breast on the mammogram or right ultrasound.

IMPRESSION: MAMMOGRAM BENIGN, ULTRASOUND BENIGN

Recommend routine screening mammography beginning at age 40 unless clinically indicated sooner. There is no mammographic or sonographic evidence of malignancy. A 5 year screening mammogram is recommended. The patient has or will receive a written notification of results in lay terms.
