STATUS: FINAL

<u>Test Name</u>	<u>Abnormal</u>	<u>Result Value</u>	<u>Unit of Measure</u>	<u>Ref Range</u>	<u>Status</u>	<u>Producer ID</u>
HEMOGLOBIN A1C	H	6.1	% of total Hgb	<5.7	F	AT

For someone without known diabetes, a hemoglobin A1c value between 5.7% and 6.4% is consistent with prediabetes and should be confirmed with a follow-up test.

.

For someone with known diabetes, a value <7% indicates that their diabetes is well controlled. A1c targets should be individualized based on duration of diabetes, age, comorbid conditions, and other considerations.

.

This assay result is consistent with an increased risk of diabetes.

.

Currently, no consensus exists regarding use of hemoglobin A1c for diagnosis of diabetes for children.
