Chemistry Tests

1/10/2019 3:46:00 PM CST eGFR:
Estimated eGFR calculations are based on the MDRD equation and are adjusted for sex (female) and race (black). eGFR results that approach 60 mL/min/1.73m2 or below reflect diminished renal function, but must be interpreted in the clinical context. Patients without markers of kidney damage who have an eGFR >60 mL/min/1.73m2 are unlikely to have kidney disease. At higher levels (>60 mL/min/1.73m2) eGFR estimates display greater biologic and measurement variability. Based on current recommendations, higher values are reported as >60 mL/min/1.73m2.

GFR (mL/min/1.73m2)	Kidney Damage	With Kidney Damage	Without
>90		Stage One	Normal
