Last 3 Days of Notes (continued)**Patient ID:** David Simmonds is a 51 y.o. male.Anxiety

Presents for follow-up visit. Symptoms include decreased concentration and nervous/anxious behavior. Patient reports no compulsions, confusion, dizziness, dry mouth, feeling of choking, hyperventilation, impotence, obsessions, shortness of breath or suicidal ideas. Symptoms occur most days. The severity of symptoms is moderate. The quality of sleep is fair. Nighttime awakenings: occasional.

Compliance with medications is 76-100%.

Here for follow up. Patient with bipolar disorder. Needs vaccination for immigration. Needs STD screening for immigration

The following portions of the patient's history were reviewed and updated as appropriate: allergies, current medications, past family history, past medical history, past social history, past surgical history and problem list.

Review of Systems

Constitutional: Negative.

HENT: Negative.

Respiratory: Negative. Negative for shortness of breath.

Cardiovascular: Negative.

Endocrine: Negative.

Genitourinary: Negative. Negative for impotence.

Musculoskeletal: Negative.

Neurological: Negative. Negative for dizziness.

Psychiatric/Behavioral: Positive for decreased concentration. Negative for confusion and suicidal ideas. The patient is nervous/anxious.

Objective:Physical Exam

Vitals and nursing note reviewed.

Constitutional:

General: He is not in acute distress.

Appearance: Normal appearance.

HENT:

Head: Normocephalic and atraumatic.

Right Ear: Tympanic membrane normal.

Left Ear: Tympanic membrane normal.

Nose: Nose normal.

Mouth/Throat:

Mouth: Mucous membranes are moist.

Eyes:

Extraocular Movements: Extraocular movements intact.

Conjunctiva/sclera: Conjunctivae normal.

Pupils: Pupils are equal, round, and reactive to light.

Cardiovascular:

Rate and Rhythm: Normal rate and regular rhythm.

Pulses: Normal pulses.

Heart sounds: Normal heart sounds.

Pulmonary:

Effort: Pulmonary effort is normal.

Breath sounds: Normal breath sounds.

General: Abdomen is flat. Bowel sounds are normal. There is no distension.

Palpations: Abdomen is soft.

Tenderness: There is no abdominal tenderness. There is no guarding.

Musculoskeletal:

General: Normal range of motion.

Cervical back: Normal range of motion and neck supple.

Right lower leg: No edema.

Left lower leg: No edema.

Skin:

General: Skin is warm.

Coloration: Skin is not jaundiced.

Findings: No bruising.

Neurological:

General: No focal deficit present.

Mental Status: He is alert and oriented to person, place, and time. Mental status is at baseline.

Psychiatric:

Mood and Affect: Mood normal.

Behavior: Behavior normal.

Thought Content: Thought content normal.

Assessment:**1. Bipolar disorder, in partial remission, most recent episode mixed (CMS-HCC)**

- buPROPion (WELLBUTRIN) 100 MG tablet; Take 2 tablets by mouth once daily Dispense: 180 tablet; Refill: 1
- FLUoxetine (PROZAC) 20 MG capsule; Take 1 capsule (20 mg total) by mouth daily Dispense: 90 capsule; Refill: 3
- FLUoxetine (PROZAC) 40 MG capsule; Take 1 capsule by mouth once daily Dispense: 90 capsule; Refill: 1
- QUetiapine (SEROQUEL) 100 MG tablet; TAKE 1 TABLET BY MOUTH AT BEDTIME Dispense: 90 tablet; Refill: 1
- traZODone (DESYREL) 150 MG tablet; TAKE 1 TABLET BY MOUTH AT BEDTIME Dispense: 90 tablet; Refill: 1

2. Screening examination for STD (sexually transmitted disease)

- HIV Ab/p24 Ag Screen
- GC/Chlamydia PCR RO
- RPR
- Trichomonas screen (urine)

3. Screening-pulmonary TB

- TB Skin Test

4. Varicella vaccination status unknown

- Varicella zoster antibody, IgG and IgM

5. Measles, mumps, rubella (MMR) vaccination status unknown

- MMR profile

6. Need for DTaP vaccine

- diphtheria, tetanus, acellular pertussis, inactivated poliovirus vaccine (KINRIX) injection; Inject 0.5 mLs into the muscle once for 1 dose Dispense: 0.5 mL; Refill: 0

Bipolar disorder- refill given

Labs (continued)

Rubella IGG Ab	>300.0	Immune >16.4 AU/mL	—	16403
----------------	--------	--------------------	---	-------

Comment:

Negative <13.5
 Equivocal 13.5 - 16.4
 Positive >16.4

Presence of antibodies to Rubella is presumptive evidence of immunity except when acute infection is suspected.

Mumps IgG Ab	>300.0	Immune >10.9 AU/mL	—	16403
--------------	--------	--------------------	---	-------

Comment:

Negative <9.0
 Equivocal 9.0 - 10.9
 Positive >10.9

A positive result generally indicates past exposure to Mumps virus or previous vaccination.

Chief Complaint**Chief Complaint**

Patient presents with

- medication discussion
depression medication
- Fatigue

Subjective

Mr. Simmonds is a 50 y.o., male presents to the office today for

Fatigue

Patient complains of fatigue. Symptoms began about a month ago. The patient feels the fatigue began with: lack of energy. Symptoms of his fatigue have been general malaise. Patient describes the following psychological symptoms: depression. Patient denies fever, GI blood loss and symptoms of arthritis. Symptoms have progressed to a point and plateaued. Symptom severity: symptoms bothersome, but easily able to carry out all usual work/school/family activities.

Reports recent fall a few days ago. Reports fatigue x 1 month. Stopped atomoxetine about same time.

The following portions of the patient's history were reviewed and updated as appropriate: allergies, current medications, past family history, past medical history, past social history, past surgical history and problem list.

Components

Component	Value	Reference Range	Flag	Lab
PROSTATE SPECIFIC ANTIGEN	<0.1	0.0 - 4.0 ng/mL	---	16403

Comment:

Roche ECLIA methodology.

According to the American Urological Association, Serum PSA should decrease and remain at undetectable levels after radical prostatectomy. The AUA defines biochemical recurrence as an initial PSA value 0.2 ng/mL or greater followed by a subsequent confirmatory PSA value 0.2 ng/mL or greater.

Values obtained with different assay methods or kits cannot be used interchangeably. Results cannot be interpreted as absolute evidence of the presence or absence of malignant disease.

Chief Complaint**Chief Complaint**

Patient presents with

- Prostate Cancer
- Manic Behavior
 would like medication increased
- STD screen
- Erectile Dysfunction

Subjective

Mr. Simmonds is a 50 y.o., male presents to the office today for

Exposure to STD

The patient's pertinent negatives include no genital injury, genital itching or genital lesions. Reports possible exposure to STD. The current episode started 1 to 4 weeks ago. Pertinent negatives include no abdominal pain, anorexia, chest pain, chills, fever, flank pain.

Bipolar disorder

Patient complains of anxiety. He complains of fatigue and psychomotor retardation. Onset was approximately 1 year

ago. Symptoms have been slightly worsening, since that time. Current symptoms include: fatigue and psychomotor agitation. Patient denies feelings of worthlessness/guilt, recurrent thoughts of death.

Erectile Dysfunction

Patient complains of erectile dysfunction. Onset of dysfunction was 1 year ago and was gradual in onset. Patient states the nature of difficulty is maintaining erection. Full erections occur occasionally. Partial erections occur with intercourse. Libido is not affected. Risk factors for ED include prostate surgery. Patient denies history of cardiovascular disease. Patient's expectations as to sexual function reasonable.

As above. Here for follow up. Reports possible exposure to STD. Desires adjustment of medication for bipolar disorder for mania

The following portions of the patient's history were reviewed and updated as appropriate: allergies, current medications, past family history, past medical history, past social history, past surgical history and problem list.

Problem List**@PROBLNOTES@****Review of Systems**

Review of Systems

Constitutional: Negative.

HEENT: Negative.

Eyes: Negative.

Respiratory: Negative.

Cardiovascular: Negative.

Gastrointestinal: Negative.

Genitourinary: Negative.

Musculoskeletal: Negative.

Skin: Negative.

Neurological: Negative.

Endo/Heme/Allergies: Negative.

Psychiatric/Behavioral: The patient is nervous/anxious.

Physical Exam

BP 125/76 (BP Site: Left arm, Orthostatic Position: Sitting, BP cuff size: Large Adult) | Pulse 60 | Temp 36.8 °C (98.2 °F) (Skin) | Resp 12 | Ht 1.626 m (5' 4") | Wt 88 kg (194 lb) | SpO2 97% | BMI 33.30 kg/m²

Physical Exam

Constitutional: He is oriented to person, place, and time. He appears well-developed and well-nourished.

HEENT:

Head: Normocephalic and atraumatic.

Mouth/Throat: Oropharynx is clear and moist.

Eyes: Pupils are equal, round, and reactive to light. Conjunctivae and EOM are normal.

Neck: No tracheal deviation present. No thyromegaly present.

Cardiovascular: Normal rate, regular rhythm and normal heart sounds.

Pulmonary/Chest: Effort normal and breath sounds normal.

Abdominal: Soft. Bowel sounds are normal.

Musculoskeletal:

Cervical back: Normal range of motion and neck supple.

Neurological: He is alert and oriented to person, place, and time.

Psychiatric: He has a normal mood and affect. His behavior is normal. Thought content normal.

Nursing note and vitals reviewed.

Assessment & Plan

David was seen today for prostate cancer, manic behavior, std screen and erectile dysfunction.

Diagnoses and all orders for this visit:

Bipolar 1 disorder with moderate mania (CMS-HCC)

- lamoTRigine (LAMICTAL) 150 MG tablet; Take 1 tablet (150 mg total) by mouth daily

Screen for STD (sexually transmitted disease)

- GC/Chlamydia PCR RO
- HIV 1&2 antigen & antibodies w/ reflexes
- RPR

Prostate cancer (CMS-HCC)

- PSA

Erectile dysfunction, unspecified erectile dysfunction type

- tadalafil (CIALIS) 20 MG tablet; Take 1 tablet (20 mg total) by mouth Daily as needed for Erectile Dysfunction

Bipolar disorder type I- increase lamictal to 150 mg / day

STD screen- check urine for GC and chlamydia. Check HIV and RPR. Advise on safe sex again

Prostate cancer- recheck PSA

Erectile dysfunction- refill cialis

Give further advise with results.

Components

Component	Value	Reference Range	Flag	Lab
PROSTATE SPECIFIC ANTIGEN	<0.1	0.0 - 4.0 ng/mL	—	16403

Comment:

Roche ECLIA methodology.

According to the American Urological Association, Serum PSA should

decrease and remain at undetectable levels after radical

prostatectomy. The AUA defines biochemical recurrence as an initial

PSA value 0.2 ng/mL or greater followed by a subsequent confirmatory

PSA value 0.2 ng/mL or greater.

Values obtained with different assay methods or kits cannot be used

interchangeably. Results cannot be interpreted as absolute evidence

of the presence or absence of malignant disease.

Patient presents with

- Manic Behavior
quetiapine making him feel like a zombie
- inguinal swelling
- Erectile Dysfunction
- Chest Pain

Subjective

Mr. Simmonds is a 49 y.o., male presents to the office today for

Chest Pain

David Simmonds complains of chest pain. Onset was 2 weeks ago. Symptoms have improved since that time. The patient's pain is associated with activities. The patient describes the pain as dull and does not radiate. Patient rates pain as a 5/10 in intensity. Associated symptoms are: none. Aggravating factors are: heavy lifting. Alleviating factors are: rest. Patient's cardiac risk factors are: none. Patient's risk factors for DVT/PE: none. Previous cardiac testing: none.

Bipolar disorder

Patient complains of anxiety. He complains of fatigue and psychomotor retardation. Onset was approximately 1 year ago. Symptoms have been stable since that time. Current symptoms include: fatigue and psychomotor retardation. Patient denies feelings of worthlessness/guilt, recurrent thoughts of death and suicidal attempt. Stable with

• PROSTATE SPECIFIC ANTIGEN	06/29/2020	0.04

Assessment & Plan

David was seen today for manic behavior, inguinal swelling, erectile dysfunction and chest pain.

Diagnoses and all orders for this visit:

Chest pain, unspecified type

- ECG 12 lead

Erectile dysfunction, unspecified erectile dysfunction type

- tadalafil (CIALIS) 20 MG tablet; Take 1 tablet (20 mg total) by mouth Daily as needed for Erectile Dysfunction

Bipolar disorder, in partial remission, most recent episode mixed (CMS-HCC)

- trazodone (DESYREL) 100 MG tablet; Take 1 tablet (100 mg total) by mouth bedtime
- QUetiapine (SEROQUEL) 100 MG tablet; Take 0.5 tablets (50 mg total) by mouth bedtime

Inguinal swelling

Bipolar disorder- decrease seroquel 50 mg q hs, Advise to see psychiatry

Chest pain- atypical - ECG done which shows normal sinus. Symptoms likely muscular. Advise NSAID. Let us know if persistent or worsening symptoms

Erectile dysfunction- refill cialis

Inguinal swelling- no definite hernia- observe
