Encounter Notes:

Encounter Reason/Date	follow up with study results 05/31/2023 - 11:45AM - MAIN OFFICE					
History of Present Illness	Ms. Yeend is a 28yo female who presents to the clinic as a new patient. She is referred by Dr. Blackwell for PVD evaluation. Patient states that between March/April she noticed skin discoloration to the right medical calf. The day prior to the rash she completed leg exercises and then the next day was at a wedding and was dancing when she noticed the onset. She showed me a picture of a similar rash that she was able to find on Google which had a skin mottling appearance to it. She reports that this discoloration resolved on its own. However, she did notice another incident occurred 1 mo later. This also resolved on its own. Arterial duplex was obtained in office today that shows right leg ABI 1.06, TBI 0.98. Left ABI 0.99, TBI 1.12.					
Review of Systems	Constitutional:Constitutional: no fever or chills. Eyes:Eyes: no vision change. Cardiovascular:Cardiovascular: no shortness of breath when walking or breath when lying down and no chest pain, arm pain on exertion, or ankle swelling. Respiratory:Respiratory: no cough, wheezing, or shortness of breath. Gastrointestinal:Gastrointestinal: no nausea or vomiting. Musculoskeletal:Musculoskeletal: no muscle aches, weakness, or cramps and no swelling in the extremities or difficulty walking. Integumentary:Skin: no jaundice, discoloration, or ulcers. Neurologic:Neurologic: no weakness, numbness, tingling, dizziness, or headaches. Psychiatric:Psych: no irritability, depression, or anxiety. Hematologic/Lymphatic:Hematologic/Lymphatic no bruising.
