Date: 07/10/24

PATIENT: HAYES, PHILLIP **DOB:** 01/29/1988 **Gender:** MALE **MRN:** 5380 **AGE:** 36 Years

VISIT TYPE: Office Visit New

CHIEF COMPLAINT: tick bite evaluation

HISTORY OF PRESENT ILLNESS: 36 year old male presents to clinic with concerns over a tick bite. He reports he noticed a tick to his right upper buttock 2 days ago and was able to remove the tick (he believes the head was still attached upon removal). He wants to verify the whole tick was removed and wants to make sure he doesn't have lyme disease.

He isn't sure how long the tick had been on him, but he had been in the woods over the weekend prior to noticing it and removing it.

VITALS: BP: 113/58 **Pulse:** 96; **Temp:** 97.7; **Resp:** 16; **Ht:** 72.5 in.; **Wt:** 170.5 lbs.; **BMI:** 22.8; **Pulse Oximetry:** 96%
