MA US Breast Limited Right: 10/29/2024. BI-RADS: 3

CLINICAL: 40-year old female for right diagnostic breast ultrasound. Tyrer-Cuzick lifetime risk of 10.1%. No personal or first-degree family history of breast cancer. The patient has bilateral implants.

PRIOR EXAMS

Mammogram(s): 10/21/2024.

ULTRASOUND TECHNIQUE: Targeted right breast ultrasound: High-resolution real-time targeted ultrasound scanning was performed focused to the area of clinical and/or imaging concern.

ULTRASOUND FINDINGS

Right: Upper Outer Quadrant, 5 cm from nipple: Ultrasound of the right breast at 9:00, 5 cm from nipple, demonstrates a nonenlarged lymph node, 0.9 x 0.7 x 0.3 cm. No suspicious mass or abnormal fluid collection identified.

IMPRESSION

Right: Upper Outer Quadrant, 5 cm from nipple
• Probably Benign with likelihood of malignancy 2% or less.

RECOMMENDATIONS

Right: Upper Outer Quadrant, 5 cm from nipple
• Six month followup with diagnostic mammography and diagnostic ultrasound. Ultrasound to be performed only if needed.

ADMINISTRATIVE: The results and recommendations were discussed with the patient at the time of the exam. The patient received a written notification of results in lay terms.

OVERALL ASSESSMENT CATEGORY

BI-RADS-3: Probably Benign.
